

SMS' H₂S program offers the most comprehensive solution available to the energy industry. Because no single program can fit every customer or every job, our H₂S program and standard operating procedures are dynamic and customizable for each client's needs using a guided intranet system to mediate discussion and develop the best practices for each situation.

OUR H₂S TECHNICIANS

- Certified in first response/emergency medical response
- Perform daily reporting, lead drills and safety briefs
- Understand basic metallurgy
- Follow standards established by NACE International
- Administer qualitative and quantitative fit testing
- Perform daily calibration and "bump tests" on personal monitoring devices
- Instruct crews on worksite awareness, exposure level alarms and use of their personal gas monitoring device

All newly hired technicians receive extensive training and education. They also shadow a tenured H₂S safety technician in a two-year mentorship program.

Coupled with our highly-trained H₂S technicians, SMS offers the best rental equipment available. Our smaller, lighter, more durable equipment assures everyone's safety. As part of our dedication to safety, we include an electronic personal detection device for every worker on the site.
